For organizations looking to minimize scrap, rework, complexity, defects, delays, and other forms of waste.

Creating a Lean Enterprise

Course Overview

How is it possible to deliver greater value to your customers, while at the same time reducing costs?

"Lean Thinking" divides all business activities into "value-added" or what the customer will pay for, and "waste" that the customer won't pay for and the organization can do without. When the Lean philosophy is translated into action across the entire enterprise, it is known as a "Lean Transformation". If you are not currently using lean methods across your entire enterprise, this workshop will show you how to use the tools and methods of Lean, and how to organize and implement a lean transformation in your organization. Topics covered will include:

Eliminating Waste	**Continuous Flow**
Small Lot Production	**Value Stream Mapping**
5S and Visual Control	**Standard Work**
Measurement Systems	**Kaizen Events**
Organizing for a Lean Transformation	**Sustaining a Lean Culture**

Who Should Attend

This workshop is for organizational leaders, managers and other key personnel tasked with reducing scrap, rework, complexity, defects, delays, and other forms of waste in their organization.
